### **Workflow:**

Because it's difficult to rearrange individual pages in iBooks Author, it's important to layout your chapter in advance. As your idea for a chapter begins to take shape, you might create a rough layout in PowerPoint, Google Presentation or Keynote. This will help you visualize what content will be on each page.

### **Content:**

Text - you should have all text typed out and saved in Word, Pages or as a Text file. Do not bother to format it (fonts, italic, color) You'll do that in iBooks Author

For all content you will need a source archive name, content title, creator (if applicable) and it's original URL. Get it the first time.

Access - Have all content available on a drive you can access from the digital lab

Acceptable file formats for iBooks Author:

- Image files: JPG, JPEG, PNG, GIF Note: The recommended file format is JPG. If the image includes transparency, PNG is recommended.
- Video and audio files: MP4 video files and M4A audio files. You can convert other types of files using iMovie or QuickTime Player.
- Keynote presentations are fully functional in iBooks Author.

Video option:

If you have the video as MP4 we can insert the actual file into the iBook. The other option (if you have a YouTube or Vimeo video) is to embed it into the iBook. You'll need URL and bibliography info.

We will use [Bookry](#) to create an embed widget. That keeps the file size of the iBook smaller. Good
